Sanosil products for neutralising odours

SanoSorb concentrate

Odour neutraliser concentrate with immediate effect. Ideal for industry, waste and waste water treatment

When used: Neutralisation of unpleasant odours with a biological origin (rotten organic material, butyric acid, faeces)

Contains: Odour neutralizers complexing agents, stabilisers, surfactants

Usual dosage: 20% mixed with water

Preferred application: Wiping, targeted spraying

Canister sizes: 5kg, 10kg, 25kg

Shelf life: 2 years

Special features: Can be used together with Sanosil disinfectants

SanoSorb longactive

Ready to use odour neutralizer with immediate and long-term effect. Perfect for changing rooms, sports facilities, keeping pets etc.

When used: Neutralisation of bad odours of biological origin, seeped-in liquids, waste management, room care household/facility management, vehicle preparation, treatment of sports protective equipment (martial-arts, hockey etc.)

Contains: Odour-absorbing active ingredients with immediate and long-term effect

Canister size: 1kg, 5kg, 10kg

Special features: Forms active substance depot for long-term effect, stand-alone application

SanoSorb PX

Urine odour neutraliser with immediate and long-term effect. Ideal for toilet facilities and building maintenance

When used: Removal of urine odour – even if liquid has permeated toilet facilities, upholstery and mattresses, etc.

Contains: Bioenzymes, surfactants, fragrances, deodorising substances.

Usual dosage: 3–10% mixed with water

Preferred application: Wiping, targeted spraying

Canister sizes: 1kg, 5kg, 10kg

Sanosil products for neutralising odours

SanoSorb PX neutral

Urine and animal odour neutraliser with immediate and long-term effect. Without fragrances - Ideal for animal stables

When used: Removal of urine and pet odour

Contains: Bioenzymes, surfactants, deodorising substances.

Usual dosage: 3–10% mixed with water

Preferred application: Wiping, targeted spraying

Canister sizes: 10kg

SanoSorb Powdersponge Highly effective and high-yield liquid binder

When used: Binding and deodorising unpleasant smelling watery liquids. Simplifies removal and prevents odour development. Absorbs 500 - 1000 x its net weight in water and forms stable hydrogel. Ideal for taxis or transport vehicles of emergency organisations that have to transport people who lose fluids.

Contains: Superabsorbent polymers, deodorising substances

Preferred application: Scattering, scooping

Canister sizes: 500g

Multienzym L

Enzymatic drain cleaner - breaks down decaying substances and bio-films, stops drain odour

When used: For the treatment of poorly draining and smelly drains of all kinds (kitchen, bathroom, shower etc.)

Contains: Enzymes, tensides, fragrances

Canister size: 5l

Special features: The odour-eliminating effect is significantly better and longer-lasting than with commercially available competitor products.

Sanosil Odour Control

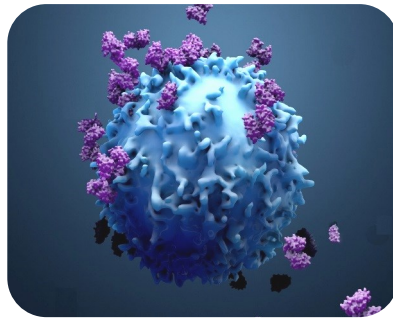

Neutralisation of unpleasant odours : How it works

Modern odour control agents work according to the following principles: neutralizing odour molecules and/or degradation of the odour sources. The targeted use of these technologies enables very rapid and sustainable odour control.

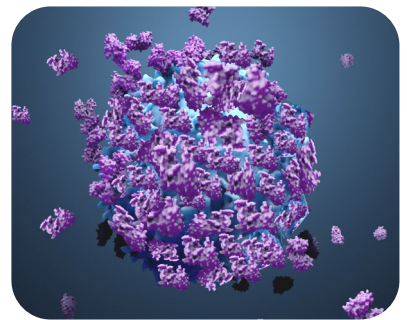

A) Immediate effect by neutralising the odorous substances

Odour molecules float in the air. The higher the concentration, the more intensively the odour can be perceived

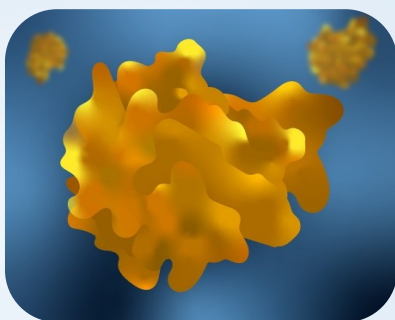

Active ingredients immediately bond firmly to the odour molecules and permanently encapsulate them

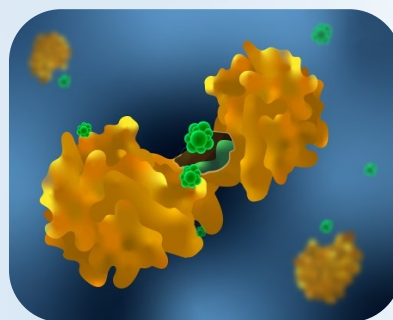

Encapsulated odour molecules lose their "aroma" – the unpleasant odours are therefore permanently neutralised

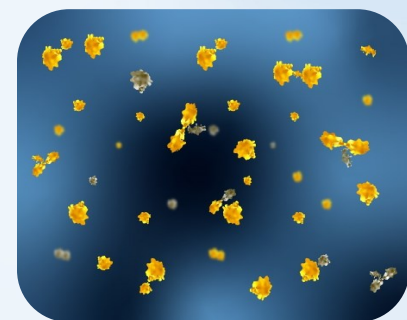

B) Long-term effect by breaking down the odorous substances

Organic residues decomposes in the air and starts to smell unpleasant

Biochemical active substances break down the fouling residues into its elemental components

The decomposed odour-sources can no longer produce unpleasant smells
