# SanoSorb longactive

Ready-to-use odour neutraliser with immediate and long-term effect

... for the rapid and lasting reduction of unpleasant organic odour

- ✔ With highly effective bioenzyme technology
- ✔ Degrades organic odour sources
- ✔ Lasting action with immediate and long-term effect
- ✔ Pleasant, subtle fresh scent
- ✔ Ready-to-use
- ✔ Contains no biocides or environmentally harmful ingredients
- ✔ Forms an active-substance layer on porous surfaces
- ✔ Can also be used on textiles, mattresses or upholstered furniture
- ✔ Easy and safe application
- ✔ High-quality product made in Switzerland

## SanoSorb longactive: product description

SanoSorb longactive is a next-generation odour control product. It uses a combination of odour-neutralising substances and biological enzyme technology to provide an active and long-lasting effect.

Sanosorb longactive does not contain any harmful substances and is ideal for flexible use in the professional and private room-care segment. This ready-to-use solution is safe, highly effective and easy to apply by spraying or wiping.

It leaves behind the pleasant, discrete scent of well-kept rooms.

In contrast to many conventional products, the unpleasant odours are not simply masked. Instead, they are instantly neutralised and the odour sources are actively eliminated. In addition, an active-ingredient residue is left behind, especially on absorbent surfaces, which ensures a long-lasting effect.

### OVERVIEW

**PRODUCT TYPE**  
Ready to use

**APPLICATION**  
Spray and/or wipe

**ELIMINATES ODOURS SUCH AS**  
Waste/garbage bag liquids, faeces, sewage, putrefaction, animal odours, vomit and sweat, etc.

**SHELF LIFE**  
2 years

## How it works

SanoSorb longactive produces a two-phase effect: odour-neutralising substances rapidly and permanently encapsulate free odour molecules on contact (immediate effect).

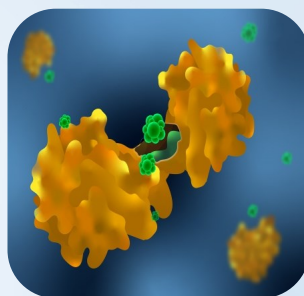

At the same time, liquid active ingredients permeate deep into the pores of the treated surfaces. There, the actual odour sources (organic, decomposing residues) are broken down, which in turn stops the formation of new odours.

This combination provides a uniquely rapid and simultaneously long-lasting effect.

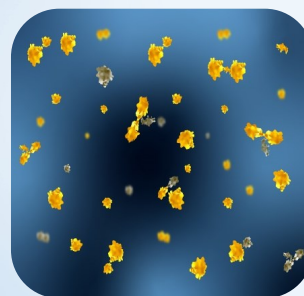

## SanoSorb longactive: 2-phase effect

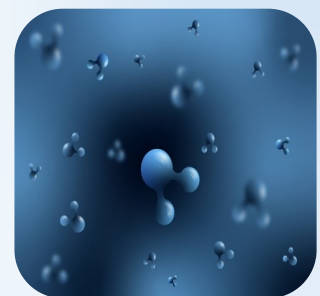

1. The source of the odour breaks down in the air and starts to produce an unpleasant smell.

2. The active ingredients encapsulate existing odour molecules and break down the odour sources into their elementary components.

3. The formation of new odours is stopped or at least significantly reduced.

4. The source of the odour is dissolved and broken down.

## Instructions for use

### Precautionary measures:

Avoid contact with eyes, do not ingest, do not inhale aerosols.

SanoSorb longactive

### Localisable odour sources:

Remove the odour source as far as possible. Clean surfaces to remove sticky liquids (e.g. excrement, vomit, sour milk and rubbish bag liquids, etc.) as far as possible using a suitable cleaning agent.

Then apply or spray on SanoSorb longactive. Allow to dry. Check for odours. Repeat if necessary. Waste bins or nappy bins, etc. can also be treated with a few sprays of SanoSorb longactive between emptying cycles.

### Washing machine / laundry

Add SanoSorb longactive to the fabric softener program instead of fabric softener (maximum 40 degrees Celsius). Apply a dosage of approximately 50–80 ml.

Alternative: apply a few sprays of SanoSorb longactive to washed, dry, hung textiles (e.g. curtains) and allow to dry. Also highly effective as a laundry deodorant.

### Shoes / textiles / upholstery

Spray the insides of shoes / textiles with a few sprays of SanoSorb longactive and allow to dry. Check for odours. Repeat if necessary.

Caution: dirt rings may appear on dirty textiles / upholstery that have been sprayed with water or a SanoSorb longactive solution. In case of heavy soiling, wash first / use a carpet cleaner and / or test on an inconspicuous spot.

### In gas phase/air:

E.g. burst sewer pipe, hoarder's dwelling, toilet use: eliminate source of odour and clean well, disinfect with Sanosil disinfectant if necessary. Then spray a few bursts of SanoSorb longactive into the air above the odour sources. Do not inhale aerosols directly. Let it work for a few minutes, then check the smell. Repeat treatment if necessary until the odour is neutralised.

### Our application notes, both in written and verbal form, are based on extensive testing.

We provide advice to the best of our current knowledge, but without any obligation insofar as the application and storage are beyond our direct control. Product descriptions or information about the properties of the preparations do not contain any statements concerning liability for any damage.
